### **DETAILED ACTION**

Claims 1- 44 are currently pending.

#### **Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18,43, drawn to method for sequence evaluation, classified in class 702, subclass 20.
- II. Claims 19-34, 44 drawn to method for mitochondrial DNA analysis, classified in class 435, subclass 6.
- III. Claims 35-42, drawn to an automated system, classified in class 707, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-II are related as independent and/or patentably distinct methods which have different method steps, different functions, and different modes of operation. For example, method of Group II requires steps comparing genetic information and nucleotide signatures not required for Group I.

The automated system of Group III is independent from the method of Group I because the latter does not require the specific features of the system of Group III, and

Art Unit: 1631

can be carried on using other systems. e.g., systems comparing base composition of various sequences.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
